EVIDENCE-LED MOTOR CLAIM TRIAGE

Turn claim evidence into a defensible decision.

ClaimIntel turns the evidence already collected for a motor claim (photographs, garage estimate, FIR, licence, RC, telematics and dash-cam) into an evidence-led assessment, a fraud analysis, an independent repair-cost benchmark and an auditable settlement recommendation.

AI assesses the evidence and calculates the financial outcome.

30+
fraud checks
run on every claim

Under ₹3
of AI cost to assess
one complete claim file

100%
of settlement figures traceable
to versioned, auditable rules

THE PROBLEM

Surveyors do not scale. Independent evidence does.

Every insurer already has surveyors and a fraud unit. What no one has is an independent first look at *every* claim **within minutes** of it arriving, one that can still be explained line by line months later.

01 Inflated repair estimates become overpayments

When nothing prices the parts independently, an inflated estimate is settled at face value. The overpayment never appears as a loss. It appears as a settled claim.

02 Fraud is visible in the portfolio, not in the queue

Repeat garages, recycled playbooks and staged collisions show up clearly in claim history, but not in front of the adjudicator making today's decision.

03 The regulatory clock does not flex with volume

Surveyor appointment, report and settlement deadlines stay the same through festival spikes and monsoon surges, whatever the queue looks like.

04 A figure you cannot explain cannot settle a claim

Any assessment has to survive an Ombudsman query, an internal audit and the claimant's lawyer asking exactly how the number was reached.

ALL FOUR ARE ONE GAP

Evidence arrives faster than anyone can independently check it. ClaimIntel closes that gap on every claim that comes in, not only the ones somebody had time to question.

THE SHIFT

From manual review of every claim to evidence-led triage on every claim.

ClaimIntel does not replace investigation. It gives every incoming claim a first, evidence-led layer of assessment, so investigators reach the claims that need them sooner, with the groundwork already done.

ASSESS
Read damage from the photographs and reconcile it against the garage estimate.

VERIFY
Run fraud and consistency checks across documents, pricing, telematics and claim history.

DECIDE
Calculate the settlement and produce an auditable recommendation.

Priced against the market

Parts are benchmarked against independent OEM and market sources, never against the estimate being audited.

AI calculates. Your team decides.

AI works out the settlement against versioned rules, and anything that fails to complete holds the claim for review rather than passing it.

Ineligible claims cost nothing

An eligibility check runs before any AI processing, so a claim outside its policy period or scope of cover is closed without model spend.

WHAT THE INSURER GETS

STOP LEAKAGE
Identify inflated repair estimates before payout.

DECIDE FASTER
Assess every claim on arrival and surface the claims that need deeper investigation.

DEFEND EVERY FIGURE
Trace each financial calculation to a rule and a source.

CONTROL AI SPEND
Meter and attribute model usage at claim level.

KEEP DATA IN INDIA Every model call, text and vision alike, stays in India.

HOW CLAIMINTEL WORKS

From the evidence you already collect to a decision you can defend.

ClaimIntel reads the documents and photographs a claim already carries, checks them against each other and against the market, and returns a recommendation with the reasoning attached. All in minutes, before the claim is decided.

THE CLAIMINTEL PIPELINE

EVIDENCE IN

- Damage photographs
- Garage estimate & FIR
- Driving licence, RC
- Telematics, dash-cam
- Policy & claim history

→

CLAIMINTEL

Gate → Assess → Investigate → Settle

- Eligibility gate, before any AI spend
- Damage, fraud, reconstruction, context
- Independent pricing and labour
- Guards and IRDAI settlement maths

→

ANSWERS OUT

- What is actually damaged?
- What should it cost?
- Is this claim honest?
- What do we pay?
- Can we defend the figure?

AI assesses the evidence and **calculates pricing, depreciation, deductibles and payout** against versioned rules, all testable and replayable.

WHAT CLAIMINTEL BRINGS TOGETHER

Damage assessment

Reads damage from the photographs and reconciles it against the garage estimate: every claimed part confirmed, contradicted or flagged as undeclared, with the evidence marked on the image.

Fraud intelligence

Runs 30+ fraud checks across claim evidence, pricing, documents, telematics and claim history, and scores the claim consistently, so the same evidence always scores the same way.

Independent pricing

Benchmarks parts against independent market and OEM sources rather than the estimate being audited, and gives no verdict at all when too few parts can be priced.

Auditable settlement

Calculates depreciation, deductibles, total-loss tests and the final settlement against versioned rules. A regulatory change updates the ruleset, not the code.

Enterprise-ready without replacing your claims system.

ClaimIntel sits alongside the claims, policy and fraud systems you already use. It adds an evidence-led triage layer without replacing your system of record.

Runs in your AWS account
Every model call runs and stays in India.

No new database, no migration
Runs on files, not a new database. Nothing to migrate.

Uses evidence you already collect
Photos, FIR, estimate, licence and RC. Telematics optional.

Fails closed by design
If a check cannot complete, the claim is held for review.

Configurable thresholds
Score bands, check weights and rules are settings, not code.

Cost metered per claim
Every model call is logged and costed against the claim.

Under ₹3 of AI cost per claim assessed

30+ fraud checks per claim

100% of settlement figures traceable to rules

India where every model call runs

01 ASSESS → 02 SHADOW PILOT → 03 PROVE → 04 SCALE

See ClaimIntel run on your own claims.

A focused assessment, then a shadow-mode pilot on a defined claim category, with no live decision changes. **Write to genai.marketing@ganitinc.com to start your ClaimIntel journey.**
